

Traffic and Transport

Fact sheet

We understand it is important to keep people moving safely and efficiently around, into and out of the city during construction and the events.

We will provide more information about how traffic will be managed during construction and events as we work through the detail.

Clear signage and information will be provided in advance to support people walking, cycling, driving and using public transport.

During construction

Detailed planning is underway to carefully stage construction works and minimise impacts on residents, businesses, Adelaide Park Lands users and people travelling through the area.

Some temporary road closures will be required during the construction periods but we will co-ordinate these activities, whenever possible, to avoid busy times on the road network.

Importantly public transport services, including O-Bahn services, will continue to operate during construction.

During the motorsport events

Road closures for the MotoGP™ event will be managed in a similar way to the bp Adelaide Grand Final.

Detailed planning is underway to keep people moving during the motorsport events, including identifying opportunities to reopen key roads between events and introducing measures to support people travelling through the area.

While the final dates for the 2027 MotoGP and Supercars events are yet to be confirmed, there is expected to be around 10 days between the two events.

Measures include:

- keeping Bartels Road open between events
- investigating opening Dequetteville Terrace between events on weekdays
- investigating opening Wakefield Road for as long as possible during events
- providing additional bus services
- limiting closures of the O-Bahn city tunnel between Hackney Road and East Terrace to one day before events and during event periods.

When the O-Bahn city tunnel is closed, O-Bahn services will continue to operate. We are assessing the most suitable diversion route in the city.
