

Flagstaff Road Upgrade project

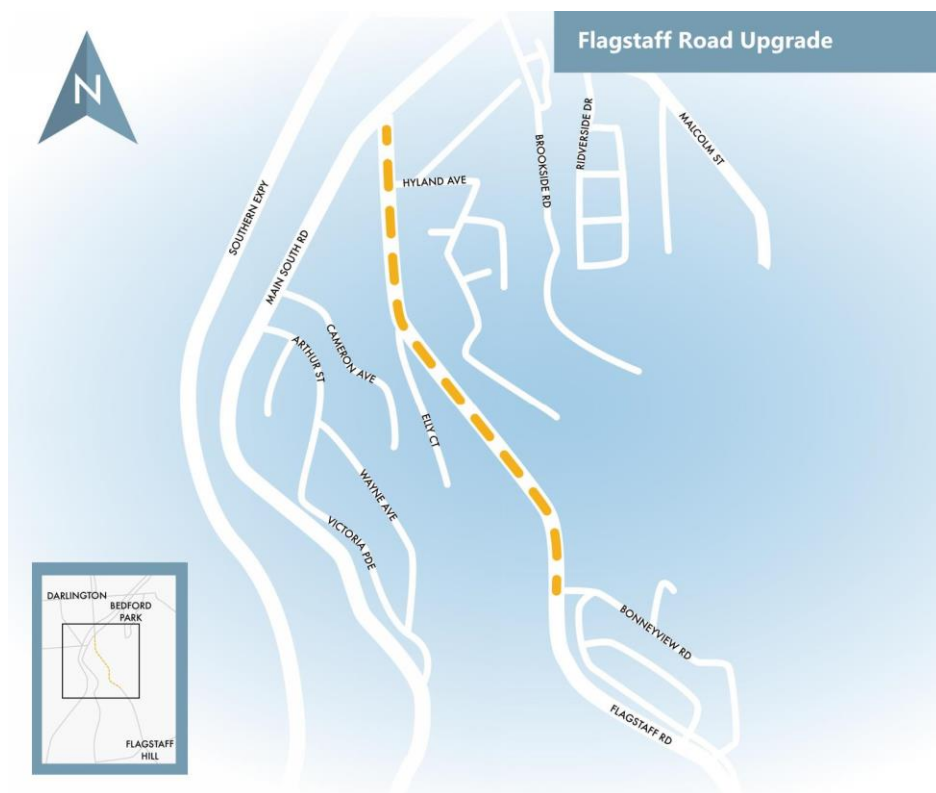

The South Australian Government has announced \$32.9 million in funding for the upgrade of Flagstaff Road between Hyland Avenue, Darlington, and Bonneyview Road, Flagstaff Hill, to install a fourth lane to make it a permanent two-way dual carriageway

Flagstaff Road is a major arterial road used by more than 25,000 motorists every day to commute to other parts of the city. For 800 metres of its overall 3.3 kilometre length between Hyland Avenue and Bonneyview Road, the road consists of only three lanes. Flow on the centre lane is reversed daily to cope with peak-hour traffic in the mornings and evenings. This is a potential cause of confusion for motorists travelling during these periods and remains a safety concern.

The additional lane will be installed as a permanent two-way dual carriageway to reduce traffic congestion, reduce confusion and improve efficiency and safety for motorists travelling on Flagstaff Road. It will provide room to overtake slow-moving traffic and allow emergency vehicles to proceed without being held up by other traffic.

Detailed planning to ascertain the preferred option to upgrade this road has commenced. The contract for the planning study, which will conclude in 2020, was awarded to Aurecon.

The Department of Planning, Transport and Infrastructure is seeking to better understand community issues and concerns. We encourage you complete the survey at yoursay.sa.gov.au/flagstaffroad as your response will help to inform the design and project outcomes.
