

T2D TORRENS TO DARLINGTON

WHAT IS A TUNNEL LAYDOWN AREA?

As part of the T2D Project we will be establishing a laydown area for each tunnel, primarily to support tunnelling operations.

Like similar-sized projects around Australia, the T2D tunnel laydown areas will be used to:

Provide sufficient space to assemble, commission and launch the tunnel boring machines (TBMs)

House machinery, equipment and sheds to support the construction of the tunnels and new motorway

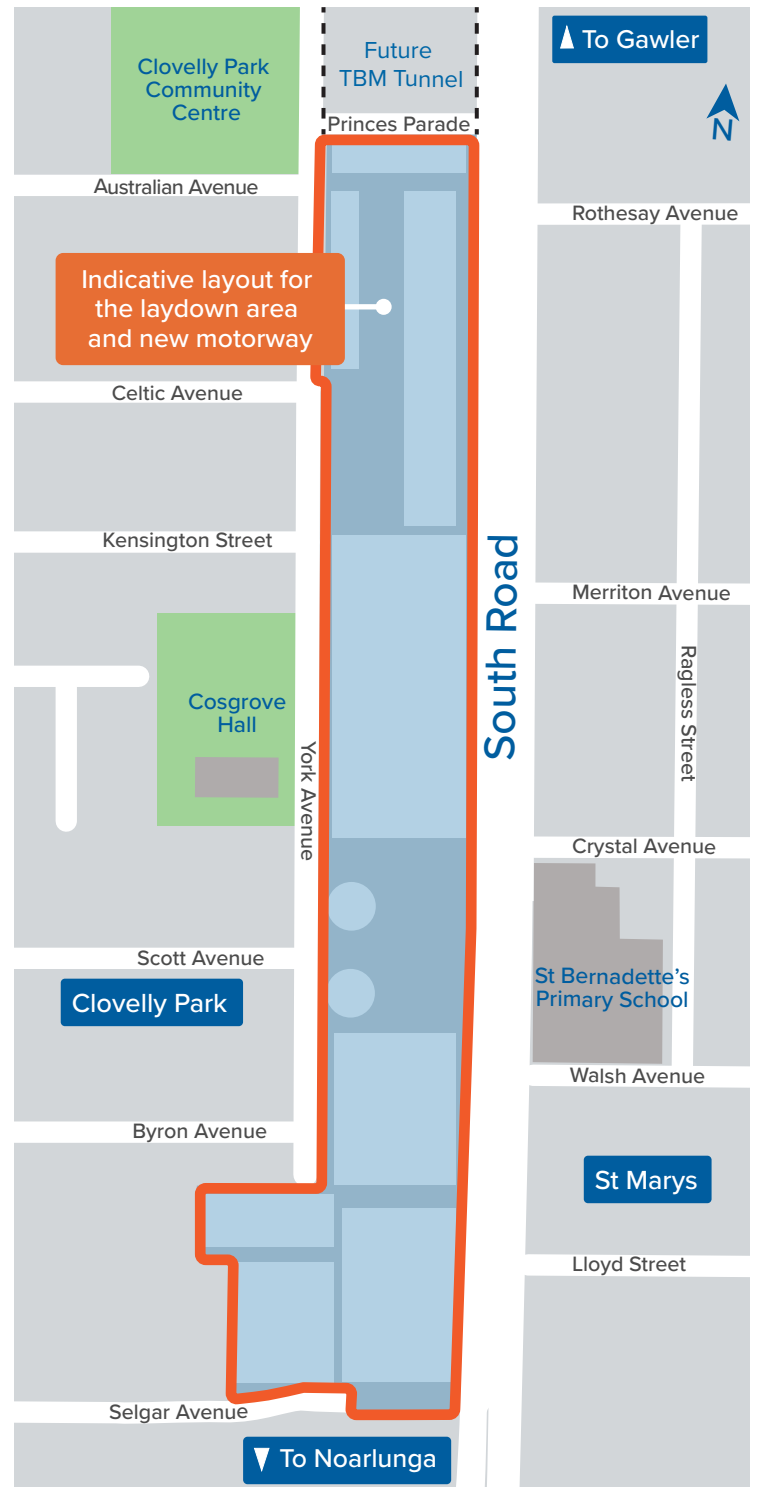

Facilitate the delivery of materials necessary to construct the tunnels such as precast lining segments and the removal of spoil excavated by the TBMs

Establish worker facilities and office spaces

Upon completion, the laydown area will be transformed into the new motorway, connecting the Darlington to the tunnel.
